

## **JOB DESCRIPTION:**

### **POWER SUPPLY Development Engineer :**

Gaia Converter is a global manufacturer of electronic power converter modules for the Avionics, Military and Railway ([www.gaia-converter.com](http://www.gaia-converter.com)).

We offer a product catalog that includes DC-DC and AC / DC converters as well as related input protection products needed to build modular high-reliability power supply architectures from 4 to 1000W.

We are present in 28 countries around the world through our subsidiaries and local distributors.

Our industrial mastery, our ability to innovate and our permanent investments in R & D have enabled us to be among the leaders in this very demanding global industry.

As part of our development we are looking for an Electronic Engineer (M / F).

Reporting to the head of the design office, this engineer will integrate the team in charge of the electronic development of energy converters from the design to the definition of the means of testing and qualification.

Electronic engineer, you have a personal interest in systems using analog electronics, power technologies (mechanical, thermal and thermo-mechanical). Besides your technical skills, you have good analytical skills and a great curiosity for technologies.

You know the simulation software (Electrical, thermal, mechanical ...), electronic CAD (schema and placement routing)

You are fluent in English .  
French would also be appreciated

**Location:** Bordeaux Area (Le Haillan) , France.

**Contract:** Full Time

**Diploma:** Master II , Ph.D...
